

LITHOCHROME® Chemstain™ Classic

reactive penetrating stains developed exclusively for use on new or existing concrete surfaces and cementitious toppings

COLOR CHART A-412.01

LITHOCHROME® Chemstain™ Classic produces variegated, translucent color effects unique to each surface. The beautiful patina is ideal to simulate the shadings of natural stone or create artistic faux finishes. Due to their chemical reaction with concrete, Chemstain colors become part of the surface. They will not fade, chip, crack, or peel. Initial application of a compatible sealer or coating and periodic maintenance are required. See Tech-Data Bulletin A-414.

over 0266 Ash White

CS-1 Black
over A-50 Slate Gray

applied to LITHOCHROME® Color Hardener

For information about application procedures see Scofield's Tech-Data Bulletin A-414 LITHOCHROME Chemstain Classic.

Only a few of the many possible color combinations are shown. Infinite multicolored effects can be achieved by either combining the eight standard colors or applying the stains over other Scofield coloring systems or colored cementitious toppings. LITHOCHROME Chemstain Classic may be applied over LITHOCHROME® Color Hardener, CHROMIX® Admixtures for Color-Conditioned™ Concrete, or cementitious toppings including SCOFIELD® Texturtop™ and SCOFIELD® Overlay. The color effects are unique to each surface and may differ significantly from examples shown. Wide variations, mottling and unevenness are expected. Representative test sections on the surface are recommended. *To preserve the variegated appearance and protect the surface, chemically stained flatwork must be sealed with CEMENTONE® Clear Sealer or SCOFIELD® Cureseal™ or, for a more opaque, coated appearance, sealed with COLORCURE® Concrete Sealer in the matching or a similar color. For optimum performance and durability seal chemically stained surfaces with SCOFIELD® Selectseal™.*

* CS-11, CS-12, and CS-13 are suitable for interior applications only.
